PROFESSIONAL SUMMARY

Third-year CS student at Panimalar Engineering College who builds things and ships them. I've gone from writing Java programs to publishing IEEE research, training YOLOv8 models, and deploying full-stack apps for real clients — all while still in college. I write clean code, debug systematically, and pick up new tools fast. Looking for an internship where the work is real and the learning curve is steep.

EDUCATION

Panimalar Engineering College — Chennai, Tamil Nadu Sept 2023 – May 2027
B.E. Computer Science Engineering (3rd Year) | DSA, DBMS, OS, Computer Networks, OOP, Software Engineering

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, SQL
Frontend: React.js, Angular, TypeScript, EJS, HTML5, CSS3, Tailwind CSS, Bootstrap
Backend: FastAPI, Express JS, Flask, Spring Boot (basics), REST API Design & Integration
ML / AI: YOLOv8, XGBoost, Random Forest, Bagging Regressor, Scikit-learn
Core CS: Data Structures & Algorithms, OOP, Debugging, Problem Solving, Logical Reasoning
Tools: PostgreSQL, Git, GitHub, Postman, VS Code

INTERNSHIP EXPERIENCE

Frontend Development Intern — Nexsoftware March 2024 – April 2025
Angular · TypeScript · Component Architecture · REST APIs · Agile
– Owned a client project end-to-end — from design handoff to live deployment. Built the Angular app with component-based architecture, client-side routing, and responsive layouts; got my first real taste of the full software development lifecycle outside the classroom.

Machine Learning Research Intern May 2024 – June 2024
Python · XGBoost · Random Forest · Scikit-learn · Data Analysis
– Trained and benchmarked XGBoost, Random Forest, and Bagging Regressor on real weather datasets. Iterated on hyperparameter tuning using RMSE, MAE, and R^2 metrics until prediction accuracy genuinely improved — systematic problem solving applied to real data.

PROJECTS

AI for Defence — Real-Time Weapon Detection : 2025
YOLOv8 · Python · Flask · OpenCV · Computer Vision · IEEE Xplore (i-PACT 2025, #65952)
– Annotated 4,000+ images, trained YOLOv8 to 90%+ accuracy, and served it through a Flask backend at ~25 FPS. Keeping the real-time inference pipeline from choking under load was the hardest — and most satisfying — engineering problem I've solved so far.

Fuel Management System 2024
Embedded C · GPS · Microcontroller · Hardware-Software Integration
– Built a microcontroller system with GPS and float sensor that monitors fuel in real time, estimates mileage, and alerts the driver to nearby stations on an LCD — hardware and software working together the way I like best.

ATM Simulation System 2024
Java · OOP · Software Design · Debugging
– Console based ATM in Java using encapsulation, inheritance, and abstraction. Refactored it twice once I saw how messy things got without clean class design.

ACHIEVEMENTS & PUBLICATIONS

- IEEE Xplore Publication (2025): Fuel Management System, i-PACT 2025 (Paper ID: #65952) our first published research paper.
- 4th Place & Most Innovative Solution: Cognizant Techathon Built a working product and won the innovation award.
- Semi-Finalist: EDII Hackathon (Tamil Nadu Government Initiative).
- 4th Place in the Ideathon by Panimalar Engineering College.
